Education

Stanford University | Master of Science, Computer Science (Artificial Intelligence Track) | June 2025 | GPA 3.8

Stanford University | Bachelor of Science, Product Design | June 2024 | GPA 4.1

Professional Experience

UX Designer | Standard Template Labs | Sept 2025 - Present

- Architected 0→1 UX and Product strategy for an AI incident management platform; delivered high-fidelity prototypes that secured \$50 million in seed-stage backing from ICONIQ and C-Suite investors at Anthropic, Datadog, and Google.
- Collaborated with the CEO (former President of Datadog) to develop adaptive interaction patterns for LLM-driven workflows, translating dense telemetry into consumer-grade interfaces that balance human decision-making with AI automation.
- Engineered "Design-as-Code" systems using Claude Code to build generative UI components and system prompts, enabling high-velocity engineering iterations with 100% visual consistency.
- Led product discovery by bridging technical constraints with user pain points and needs, leveraging wireframes, Figma prototypes, and rapid prototyping in dev environments to define the product roadmap and drive technical requirements.

Product Design Intern | Salesforce | June 2025 - Sept 2025

- Designed an AI-agentic command center POC, prototyping 6 interactive concepts and 4 evolving versions that earned praise from the CEO of Slack and CTO of Robotics.
- Led user testing (A/B testing, journey mapping, usability testing, contextual inquiry) with 20+ users and stakeholders, directly translating feedback into production-ready iterations to maintain a user-centric development roadmap.
- Delivered a high-fidelity prototype for Dreamforce 2025, applying systems thinking to map complex multi-agent orchestration and human-operator journeys.

Product Design Intern – User Experience | Amazon.com | June 2023 - Sept 2023

- Designed and shipped a complex enterprise case management dashboard, improving security team efficiency by 30% through need finding, end-to-end user research and journey mapping.
- Synthesized 20+ interviews and 1000+ user interactive data using thematic analysis and heat mapping to guide design iterations and influence user-centric design strategy in a high-scale corporate environment.

Growth UX Design Intern | Yami | June 2022 - Aug 2022

- Optimized growth funnels for user personas unfamiliar with the Asian consumer market by identifying friction points and redesigning mobile app experience to increase global user engagement.
- Conducted competitor analysis to uncover user challenges and growth opportunities, developing design strategies to broaden app appeal across web and mobile platforms.

Lead Product Designer | Stanford Student Enterprises | March 2022 - June 2025

- Revamped Stanford's digital ecosystem, building a comprehensive design system and restructuring site architecture to eliminate redundancy and optimize navigation across key platforms.
- Shipped responsive end-to-end solutions (web, iOS, Android) using Figma and Webflow, focusing on interaction design and scalable documentation for future engineering teams.

Academia Research and Projects

Empathy with AI (Conversational Experience), Stanford Human Centered AI

Jan 2024 - Sept 2024

Developed a fine-tuned LLM system and Python evaluation framework to refine conversational UX. Focused heavily on the human-centric conversational UX to nurture social and emotional connection.

Bloom, Product Design Capstone

Jan 2024 - May 2024

Designed and developed "Bloomie," a JS-based desktop app using real-time feedback to foster social accountability and boost focus intervals by 35%. I translated research from 20+ participants into an app built with JavaScript and HTML/CSS.

Skills: Figma, Claude Code CLI, v0, Cursor, Blender, Adobe Suite (Ae, Ps, Ai), Python, HTML, CSS, JavaScript, WCAG Standards
